StoCretec Flooring AS

Comfort floor

StoCretec Comfort floor

Timeless, seamless, soundless

The comfort floor concept of StoCretec Flooring is a collection of seamless, comfortable and environmental friendly flooring systems.

The range encompasses everything from simple, single coloured finishes to design floors with patterns, artistic colourfull expressions, rustic surfaces or a flecked finish with coloured chips.

Another option is installing a seamless sound reducing and cushioning bottom layer to increase comfort. The systems are suitable in all kind of environments which includes newbuild and refurbishment projects.

A specially attractive feature is the possibility to renew the floors, in case a new design or simply a new colour is desired after a certain period of time. This will also result in lower life cycle cost than for comparable solutions as such a refurbishment can be done at a much lower cost than exchanging the floor coating entirely.

Comfort

All systems are made of elastic material which in itself brings comfort. Cushioning can be increased a lot by the inclusion of a specially elastic layer at the bottom.

Cleanability

The seamless surface provides simple and cost effective maintenance. There is no place for dust and dirt to hide.

Design

It is possible to incorporate all kinds of patterns and shapes in the coating itself or to create a rustic expression with the topcoat. By sprinkling chips a flecked finish is achieved.

Environment

The systems are environmental friendly with very low emission.

Sound reduction

By incorporating a specially flexible layer at the base of the system a considerable sound reduction is achieved.

Wear resistance

The surfaces provide high wear and scratch resistance.

System built up

Alternatives

TYPE 1

2 mm singel coloured system

The system consists entirely of low emission products (M1), primer, elastic body coat and mat topcoat.

This provides a hardwearing, easy to clean surface that is pleasant to walk on and that can be easily renovated by applying a new topcoat, eventually with a different colour!

TYPE 2

2 mm design system

Same type of system as TYPE 1, but with the body coat itself being UV resistant. By incorporating patterns or shapes in the bodycoat this will be visible by applying a transparent topcoat. Another popular solution is to sprinkle small flakes into a single coloured bodycoat and seal with a transparent topcoat.

TYPE 3

2 mm system with rustic finish

Samme type of system as 1, but with a topcoat that provides a rustic finish.

TYPE 4

6 mm system with a sound reducing cushion layer

TYPE 1, 2 or 3 can be combined with the bottom layer that consists of a very elastic binder mixed with rubber granulate.

Schools

Universities

Coating system with or without sound reduction/cushioning for class rooms corridors, canteens, gyms and entrances.

Public areas

Prestigious areas

Coating systems with or without special designs for all kind of public areas.

Hospitals

Laboratories

Coating systems with or without sound reduction/cushioning for reception area, canteen, corridors, patient rooms, operation theatres and laboratories.
